Abstract of JP 2003198994 (A)

PROBLEM TO BE SOLVED: To obtain a control system and control method for a projector which unitarily manage and control respective projectors by one personal computer so that specified contents information can be projected as desired without connecting personal computers to the projectors one to one. ; **SOLUTION:** A controller 11000 and projectors 12100 to 12600 are connected in a two-dimensionally communicable state by a network 1800, etc., and the controller 11000 sends projection information and control information to the respective projectors at a time or individually. Further, the controller 11000 obtains operation information, etc., of the projectors to monitor the projectors. ;
